Pavement Asset Management Plan

City of Terre Haute
Indiana
2018

Objectives and Measures

A. Performance Goals

It is the City of Terre Haute's goal to provide a comfortable, safe and economic road surface for its citizens. This Pavement Asset Management Plan (PAMP) will provide a structured approach into satisfying that goal by providing an overall inventory of the roadway system, costs associated with improvements and an unbiased approach at improving the overall quality of the City's roadway system. The City's PAMP will provide work plans for the next several years to prioritize funding for the greatest overall improvement to the roadway system. It is also a goal to update this plan every 2 years to make certain the funds are being spent in the most efficient way possible and that needs have not changed within the inventory.

B. The Rating System

The Pavement Surface Evaluation and Rating (PASER) System was utilized to rate the entire roadway system. The PASER rating is nationally recognized and taught as a tool for evaluating the overall condition of roadways. Generally, a scale is given to rate the roads and recommend improvements based on that rating. In Figure 1 you will see an overall distribution, by rating, of the City's roadway system based on the 2017 rating. The ratings for all roadways are included in Appendix A attached and will be updated on a biannual schedule.

Figure 1

C. Work Plan Process

Once the entire roadway system has been evaluated using the PASER System a work plan can be assembled to meet the goals and objectives of the City. All ratings were imported into the City's ArcGIS system and added along with the length and width of the roadways. According to the PASER system roads rated 6 or above only require minimal preventative maintenance while those rated 5 or less require more significant needs. Those needs vary from a small overlay for a rating of 5, to total reconstruction for a rating of 1. Figure 2 shows a breakdown of the roads by rating of 6 and above and 5 and under.

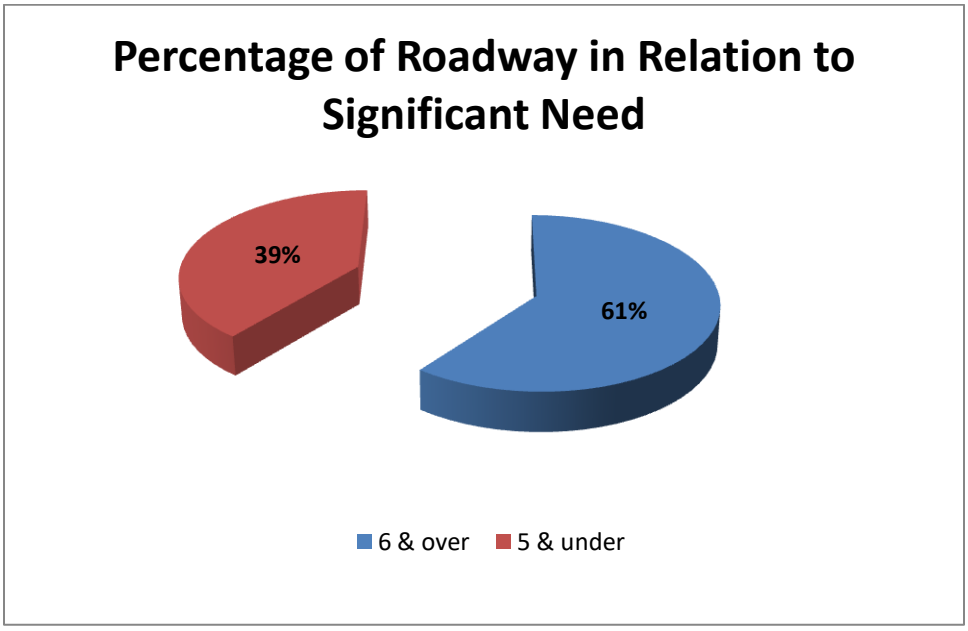

Figure 2

The PASER System recommends certain improvements depending on the rating. The City took the recommended improvements and assigned cost estimates per mile for each improvement to help in determining an efficient work plan. Traffic volumes were also utilized to develop work plans. Those roads with more traffic volume and a lower rating were given higher priority. Roads with low traffic volumes and a lower rating were added to future work plans and are to be evaluated on a yearly basis to ensure a critical need does not develop before it can be addressed. Also, due to the amount of utilities located within the roadway system, yearly utility meetings will be held. The yearly meetings will coordinate any improvements with utility work to ensure limited conflicts with utility replacement projects. From there, "To and From" limits for improvements can be obtained to determine work plans to coordinate with funding availability.

D. Work Plans and Re-evaluation

Utilizing the process outlined above, the City developed work plans for the next 5 years. Those work plans are attached in Appendix B. The City will also re-evaluate its PAMP on a semi-yearly basis to develop future work plans. The re-evaluation will help ensure that pavement preservation techniques are successful, determine the future funding needs and quantify the effectiveness of the PAMP.

E. Right of Way Conditions and Drainage

All of the City of Terre Haute's right of way(ROW) information is stored on its ArcGIS system. If additional ROW is needed to make the needed improvements, the City will acquire the ROW before the work is included in a work plan.

The roadway network of the City of Terre Haute is made up of a wide range of drainage systems, from open ditches to closed storm sewer systems. For the most part, City roads have a curb and gutter system. Regardless of the drainage, any road improvements will include positive drainage to ensure structural stability and safety for the roadway and its users.

Appendix A

Road Inventory and Ratings
